

Features and Benefits

- No Integration Required
- No Expensive Consultants
- EMNS Hosted Service
- No Software Compatibility Issues
- Uses Standard Browsers
- No Special Software
- Quick Implementation
- See Results Quickly
- 24x7 Customer Support
- Answer Questions Quickly

Implementing GSQA is a straightforward process that can be divided into four steps. Each step has a specific goal in GSQA's implementation process. This datasheet provides an overview of this process. EMNS provides project management, training and 24x7 customer support to make sure that your GSQA implementation goes smoothly.

Step 1 — Gather Setup Information For GSQA

The first step is to gather GSQA setup information. The information is divided into three groups: Material, Supplier and Administrative. The Material based information includes material codes, specifications and tests. The Supplier based information includes supplier contacts, their plant locations and materials that each supplier provides. Finally, the Administrative information includes manufacturing facilities, supplier audits and schedules, authorized users and other GSQA administrative information. EMNS provides you with all of the electronic templates necessary to simplify the gathering and tracking of this information.

Time frame — Two weeks

Step 2 — Setup GSQA

Once the initial information has been electronically gathered, EMNS sets up GSQA for your particular requirements. This includes establishing custom URLs, loading all of the provided data, and confirming the information with you to be sure that there is nothing missing.

Timeframe — Two weeks

Step 3 — Training and Initial Rollout

Once GSQA has been setup, EMNS will meet with your personnel to provide training. EMNS provides a variety of training options with GSQA, including onsite and video training. Once the training is complete, the system will be live, and you will be able to practice using GSQA for a one to two week period before moving to production. After the practice period is over, you begin using GSQA where you begin realizing the benefits that GSQA offers.

Timeframe — One to two weeks (practice)

Step 4 — Full Scale Rollout

EMNS will be with you as you roll GSQA out to both your supplier community and your plants. EMNS can provide telephone support from our Call Center, answering GSQA specific questions, and working with you to resolve material, plant or other issues that do not relate directly to the functionality of GSQA.

Timeframe — Depends on your schedule.
