

Overview of GSQA

*Global Supplier Quality Assurance
Data-Driven Process Improvement
Business Manufacturing Intelligence System*

What is the point?

The point is that a technology as dynamic as GSQA cannot be categorized by a single label. The impact is too great; the results too powerful. With worldwide exposure in over 40 countries and ROI so significant that a guarantee of ROI comes with it, GSQA is at the forefront of Global Supplier Quality Assurance.

The point works.

GSQA is a secure Web-based portal that collects, stores, and analyzes supplier material and plant production data to revolutionize process performance. Using a time-proven platform to match data points with key performance indicators, GSQA is a central point for internal departments to quickly analyze and act upon data to ensure optimal manufacturing conditions - and be alerted to critical variations and non-conformances that prevent plant disruptions.

As the worldwide leader in managing quality documentation between buyers and sellers in the global marketplace, GSQA automates: specifications, Certificates of Analysis, non-conformance and corrective action reporting, as well as on-going quality and regulatory documentation compliance.

The point is control.

- 🔗 **Quality** - proactive analytics that result in reduced material variability and decreased scrap events.
- 🔗 **Purchasing** - real-time assessment of supplier performance data for strategic sourcing.
- 🔗 **Regulatory** - automated document collection and management for assuring supplier compliance.
- 🔗 **Operations / R&D** - correlation of raw material quality with finished product attributes for improved yield.

The point is return on investment.

Define, Measure, Analyze, Improve, Control....that is the end result of GSQA.

Incoming inspection of raw materials, plant disruptions, process steps, material and compliance costs, cost of poor quality, human resources, paper, disposal costs, recalls, defects, downtime - are all reduced by GSQA.

Proven in the marketplace, GSQA saves one global manufacturer \$324,000 annually at each of its 80 facilities. It helped another trace and isolate defective supplier materials that would have shut-down multiple plants and cost millions of dollars in scrap and downtime. GSQA will even stop poor quality at your supplier's dock prior to shipment.

Get straight to the point. GSQA.
